Intrinsix has evolved...

one POWERED BY arnlea

One is Arnlea's next generation software for our Intrinsix customers, an upgrade to a cloud-app that's SaaS delivered.

We're launching it now because we've listened to our customers - and the market - about the challenges you face in field service management:

- Reduced Total Cost of Ownership (TCO)
- Safety
- Compliance
- Multiple process efficiencies
- Sustainability

We also understand the risks you face, which include: equipment breakdown; plant shutdown; environmental damage; injury, and even fatalities. The potential consequences that could follow include reputational damage – or worse.

Arnlea's market-leading product, Intrinsix, already helps you meet your operational challenges. With the world constantly changing, these critical issues – and their solutions – continuously evolve.

arnlea

Arnlea's next level product, One, brings you wider and deeper benefits to enhance and improve your operational management, reporting, and resources:

REDUCED TCO

One's improved user interface and experience makes it even easier and quicker for inspectors/field workers to record and capture data. We've also enhanced the mobility options in One to improve automatic data capture, using QR codes and RFID tags of any frequency; and even more device options work with our software. This reduces the time spent per inspection or transaction, reducing cost.

One's configuration engine allows you to use a single piece of mobile software - One - for all inspection and field service management activity across your supply chain and operations; standardising processes; reducing campaign times and cost; reducing procurement effort and resource; and consolidating activity across fewer inspectors/field workers.

Integration with your corporate eco-system optimises your data flow, making accurate information more accessible, more quickly. One enhances both the integration process and data management by using standard APIs and by automating data loading/ transfer.

This means faster, more informed decision-making, lowering both operational risk and cost.

SAFETY

One's improved user interface, experience and enhanced mobility options, reduce both inspector and field worker time spent in hazardous and dangerous areas.

COMPLIANCE

We're plugging more and more international standards and guidelines for inspections into our One software. You'll get more timely and frequent updates, because One is a cloud-based SaaS delivered solution.

EFFICIENCY

One's improved user interface and enhanced mobility options also create greater efficiencies when benchmarked against Intrinsix. There will be more frequent improvements in process standardisation, UI/UX and mobility, as well as ongoing bug fixes, all pushed out via SaaS delivery, for continuous improvement in speed, accuracy and reliability.

SUSTAINABILITY

One's continuous improvement to your operational efficiency means reduced inspector/ field worker time. Fewer people plus more efficient, standard processes mean reduced transportation and less space (warehouse, accommodation, etc.) is required. As a cloud-based SaaS offering, One reduces your IT infrastructure, capex and opex; while a cloud server has half the CO_2 emissions compared to an on-premise server.

Each of these features improves your sustainability by reducing energy costs, your burden, and your carbon footprint.

arnlea

MOBILISE FIELD WORKERS

One is the next generation upgrade for all existing customers currently using Intrinsix to mobilise inspectors and field workers with mobile digital technology. One allows you to really deliver against your digital and mobility strategies.

INTRINSIX TO ONE – THE BENEFITS ARE CLEAR

Upgrading from Intrinsix to One is simple, straightforward, and seamless. We'll be with you every step of the way to make upgrading a positive experience for your inspectors and other front line workers, IT, and management teams. And the benefits are clear.
