# one

One is Arnlea's field service management mobile software, a cloud-based application that's SaaS delivered.

We've listened to our customers - and the market - and we understand the challenges you face:

- Reduced Total Cost of Ownership (TCO)
- Safety
- Compliance
- Multiple process efficiencies
- Sustainability

We also understand the risks you face from equipment breakdown and plant shutdown, to environmental damage, injury, and even fatalities. The potential consequences that could follow any of these events include reputational damage - or worse.

## Arnlea's market-leading product, One, will help you meet your operational and supply chain challenges.

From hazardous area inspections for which Arnlea is renowned, fulfilling IEC 60079, NEC 500/505 and ATEX Directives, to other inspection types, including those following Energy Institute guidelines, such as for flexible hoses and small bore tubing. One can also be configured for LEV, PUWER, and LOLER inspections, making it an extremely powerful tool for inspection management, across your business.

One brings you wider and deeper benefits to enhance and improve your operational management, reporting, resources, unifying data management from field to office.

### ||| REDUCED TCO

One's user interface and experience makes it easier and quicker for inspectors/field workers to record and capture data. We've created enhanced mobility options to improve automatic data capture, using QR codes, bar codes and RFID tags of any frequency.

A significant number of handheld devices are also available for our software, which is platform agnostic. Together, they reduce the time spent per inspection or transaction, reducing your overall costs.

Our configuration engine allows you to use just one piece of mobile software – One – for all inspection, materials,

inventory and field service management activity across your supply chain and operations, standardising processes, reducing campaign times and cost, reducing procurement effort and cost, and consolidating activity across fewer inspectors/field workers.

Integration with your corporate eco-system optimises your data flow, making accurate information more accessible, more quickly. One enhances both the integration and data management processes via standard APIs and by automating data loading/transfer.

**This means faster, more informed decision-making, lowering both operational risk and cost.**

## ||| SAFETY

One's superior user interface, improved user experience and enhanced mobility options reduce inspector and field worker time spent in hazardous and dangerous areas.

## ||| COMPLIANCE

We're plugging more and more international standards and guidelines for inspections into our One software. You'll receive timely and frequent updates, with faster deployments, because One is a cloud-based SaaS delivered solution.

## ||| EFFICIENCY

One's exceptional user interface and enhanced mobility options also create far greater efficiencies when benchmarked against other field management solutions.

One delivers a unifying single SaaS solution for all your inspections and supply chain data management and reporting.

We provide regular and frequent updates and improvements in process standardisation, UI/UX and mobility, as well as ongoing bug fixes, all pushed out via SaaS delivery, for continuous improvement in speed, accuracy and reliability.

## ||| SUSTAINABILITY

One's continuous improvement to your operational efficiency means reduced inspector/field worker time. Fewer people plus more efficient, standardised processes mean reduced transportation and less space (warehouse, accommodation, etc.) is required.

As a cloud-based SaaS offering, One reduces your IT infrastructure, capex and opex; and a cloud server has half the CO<sub>2</sub> emissions compared to an on-premise server. Each of these features improves your sustainability by reducing energy consumption, your cost burden and your carbon footprint.

## ||| MOBILISE FIELD WORKERS

One is the next generation field management solution to mobilise inspectors and field workers with mobile digital technology. One allows you to really deliver against your digital and mobile strategies.

## ||| THE BENEFITS ARE CLEAR

Deploying and configuring One is simple, straightforward, and seamless. We'll be with you every step of the way to make onboarding a positive experience for your inspectors, field workers, IT, and management teams.
